Remedial Action Section  
Groundwater Quality Division

SUBJECT: Frederick Avenue PCB Site - Air Monitoring

Please find attached a copy of the results of air monitoring conducted by Bennett Engineering, Inc. on behalf of its client, J. E. Berger Corporation. The air monitoring was conducted on three consecutive days (December 15-17, 1986) while excavation was occurring in the more heavily PCB contaminated portions of Lot #3.

The results confirm previous verbal transmittals from Bennett Engineering that no PCB's were detected in the air during these excavation activities. No other report giving associated details of the sampling is available. If you have any questions, please contact me. Thank you.
